

KELLEN

LAVARO - SETTS & SLABS

70% Natural Stone Coating

Lavaro is a cost-effective, water-etched and architecturally refined paving product supplied in a range of pigmented colours.

The natural stone aggregates are produced in a single grain size and form approximately 70% of the top layer. A small amount of UV pigment is then used to enhance the colour of the remaining 30%. Available in a variety of sizes and colours, Lavaro is easy to incorporate into creative designs, making it a good choice for public spaces where durability and appearance are a priority.

Lavaro is also available in CERO, which uses Geopolymer Technology to replace cement as the binding agent in production, reducing CO² emissions by up to 70% over normal cement products.

Key Features

- 70% natural stone surface
- Single aggregate grain size
- Etched with high water pressure
