A Green Paving Solution

Greenstones

A Green Paving Solution

Greenstones are particularly suitable for parking spaces where grass can be planted in the recesses. They can also be laid with a water-permeable grouting material.

Available in standard concrete colours (see below), these single-sized concrete blocks provide a simple permeable solution to light-trafficked areas such as car parks or parking bays outside domestic or commercial premises.

For the base Hardscape recommend a broken natural stone aggregate with sufficient crush resistance and squareness. The aggregate must have a thickness of 4cm to 5 cm.

Specifications

dimensions (cm)	weight (kg)	number of pieces per m ²
