

Solar Streetline

Relax and recharge using solar energy

Solar Streetline

Relax and recharge using solar energy

Solar Streetline is a range of benches and tables fitted with integrated solar panels that convert sunlight into clean electricity. This sustainable energy can be used for a wide range of applications.

In addition to charging various devices, it can also be used in public spaces to control and run such things as fountains and waterfalls, or for street lighting. The charging facility provides an extra service for residents and visitors can enjoy the benefits of free electricity while taking some time to relax.

The collection is modern and timeless thanks to its stylish design and the combination of rugged concrete with a high-tech solar panel creates an interesting spatial tension. The transparent space between the solar cells, incorporated into the design of the bench, means that it does not seem too massive, and it also casts an intriguing shadow.
