

The *Alpine* collection consists of a simple, versatile, combinable system formed by a bench and backless bench that makes it possible to form straight-line aggregations with two modules of lengths: 1,75 m and 2,40 m. The complementary nature of the concrete supports with the wooden seat and back allow it to be adapted to any scenario, thus enhancing personal interaction and diversity in use.

 Update 01.04.2020

Origin

The symbiosis between the solid, resistant, stone supports and the warmth of the timber evokes an indeterminate spot in the Alps, from whence its name is derived, transmitting comfort, peace and relaxation.

Design

Alpine is designed as an intuitive, fast assembly system, facilitating its installation "in situ". The seat and back surfaces are supplied ready-assembled with machined plates at their ends for screwing to the concrete supports.

Versatile

Designed for the purpose of encouraging meetings, Alpine is 100% configurable in linear compositions and as isolated elements.

The bench offers two modules of lengths: 1,75 m. of urban character and 2,40 m. of a landscape nature.

Materials

Supports made from reinforced, etched and water-repellent concrete in the *Escofet* standard chart colour. Optionally they are also made in recycled Eco-Grey® or Eco-Black® concrete. Seat and back formed by FSC®-certified solid pine or tropical wood with a cross-section of 135 x 50 mm. The structural elements, optional armrest and fastening elements are made from stainless steel.

Installation

It is supplied dismantled and duly protected, with assembly instructions. Each support has two ground anchoring points with stainless steel threaded sleeves recessed in the concrete. The timbers of the back and seat are fastened to the supports with tamper-proof screws.

1.3. Installation system

WARNING. The bench is not manipulable once build.

1. Place the angles in the reserved frames and thread the screws (DIN 7991 M10 x 16mm). Screw the anchor bolts fully (DIN 931 M16 x 140mm).

2. Drill the pavement (Ø40x180) and fill with resin or fat mortar. Respect the distances between axes.

3. Center and place. Respect the distance between supports.

4. Place the set of seat slats on the supports. Thread the screws (DIN 7360 M8 x 10mm).

5. Place the set of backrest slats on the supports. Screw the screws (DIN 7360 M8 x 10mm).

6. Check the correct installation of the components.
(*) The bench is not manipulable once build.
